

Insight Session: Planning by doing - Tactical Urbanism during the COVID-19 pandemic

Have you ever heard about tactical urbanism? Since the outbreak of the COVID-19 pandemic, cities are facing enormous challenges that had to be answered with quick planning solutions. Nevertheless, this also entails new opportunities for a different perception of public urban space. The pandemic highlights the importance of accessible green space in our dense city structures and tactical urbanism can be a creative tool to revitalize public spaces.

The aim of this insight session is to raise awareness on the potential of tactical urbanism as an experimental low-budget approach. It will present good practices from municipalities around the world that should serve as inspiration. Furthermore, we will discuss how you as urban decision makers can embrace the concept of tactical urbanism as a possibility to extend your urban planning practices.

Date & Time: 16. February, from 10:00 - 11:30 CET (Berlin-time)
